## **1-2t/h Animal Feed Pellet Line**

Animal feed have large potential market all over the world, so more and more people want to start their own business to invest a animal feed pellet line, so our company developed this 1-2t/h animal feed pellet line, which is the smallest capacity animal feed pellet line use ring die feed pellet machine. Compared with flat die feed pellet machine, the ring die feed pellet machine have greatly advantages for example equipped with stainless conditioner can ripen the raw material by steam. So the feed pellets from ring die pellet mill is better in quality and have more market during selling.

Due to this advantage, the animal feed pellet line invested for industrial purpose like choose ring die feed pellet machine, thus this 1-2t/h animal feed pellet line is a good choice for the people who want to start his feed pellets business.

This is a complete animal feed production line to make feed pellets from raw materials directly to final pellets and pack the pellets into bags. The whole line include raw material feeding system, grinding equipment to refine the size of various raw material to mesh power, the mixing machine to mix all the mesh powder, ring die feed pellet machine to make pellets, pellet cooler to cooling down the pellets and packing machine to pack the pellets into bags. Also the de-dust system is necessary in the feed pellet line to collect dust and electric panel is important to control the entire production line.

Advantage of 1-2t/h animal feed pellet line:

1. Small capacity, low investment, suitable for starter to invest
2. Apply ring die feed pellet machine, equip with conditioner, steam from boiler can ripen the raw material in conditioner for sterilization purpose and make the pellets easy to digest by animal
3. Can make feed pellets with different diameter
4. According to the formula of different animal, we can make the compression ratio of ring die suitable to make good quality pellets
5. Three layer structure design and installation, save install land
